

RESEARCH

Advocate for increased research across all four goal areas of the Strategy

Active involvement of people with CP and their family members/ carers in all aspects of research

Increased Federal, State, philanthropic and international funding for CP research

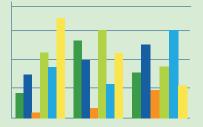

INCREASED ENGAGEMENT WITH INDIGENOUS COMMUNITIES TO

- Better understand the role of Indigenous culture and belief systems to ensure research is appropriate and respectful
- Develop relevant tools and interventions that incorporate Indigenous understandings

TOOLS AND DATA

Develop and establish reliable tools and methodologies to evaluate

- Quality of life, engagement and participation
- Interventions and supports
- Cost effectiveness

Inclusion of common CP variables in nationally collected data and from service providers

ENSURE RESEARCH ADVANCES ARE RAPIDLY TRANSLATED INTO CLINICAL PRACTICE

- Integrated approach to research and service provision
- Better understanding of the interplay of research and policy/practice
- Access for practitioners to best available evidence

PREVENTION AND CURES

- Better understanding of causal pathways
- Implementation of best practice strategies for prevention
- Advocate for further research examining the causes and potential preventative or curative strategies, including
- Neuroprotective and neuroregenerative interventions
- The relationship between genomics and CP

DIAGNOSIS AND INTERVENTION

- Implement early diagnosis
- Develop evidence-based strategies for
 - Early intervention
 - Effective interventions and treatments
 - Secondary complications
- ▶ Reduce the gap between diagnosis and intervention

Remain abreast of advances in research and clinical practice in other conditions
